

Changes to Product Color Numbers Due to Dyeing Factory Relocation

We would like to express our sincere gratitude for your continued patronage.

We are pleased to announce that the manufacturer that OEM produces our jeans stitching threads (UJ Core and UJ Cotton) will be relocating its dyeing factory in order to maintain and improve stable quality and production systems.

As a result, some product color numbers will be changed, as detailed below.

■ Regarding the Relocation to the New Factory

The new factory will essentially continue using the same dyeing recipes as currently employed.

Therefore, we believe we will be able to supply products with almost the same quality and color as conventional products.

Furthermore, the color fading after processing is also expected to be almost the same as conventional products.

■ Regarding Changes to Color Numbers

Products produced at the new factory will have color numbers with ***N*** added to the end of the current color numbers.

(Example) Current factory product C/# L-1 → New factory product C/# L-1N

Regarding the switchover, we will gradually switch to the new factory product as soon as the products dyed at the current factory run out.

■ Request for Use

While the dyeing recipe is basically the same, from a quality control perspective due to the factory change, we ask that you refrain from mixing current and new factory products within the same product line as a precaution.

Please note that some products will be discontinued due to this relocation and the instability of future dye procurement. Please check the affected products below.

- UJ Catan C/# ZX-101, ZX-102, ZX-103, LCX-2,
- Toyo Catan C/# BJ-1, K-180

We sincerely apologize for the inconvenience caused by the long-term shortage of sample books. We plan to create a sample book listing products made at the new factory, so please bear with us for a little longer.

We apologize for any inconvenience caused by the change in color numbers and other details, but we will continue to strive for even greater quality control to ensure the stable supply of our products.

We kindly ask for your understanding and cooperation in light of these circumstances.

We appreciate your continued patronage.
